
Table of contents

Chapter I	Introduction	1
1	Theoretical background	1
1.1	Ecological background	1
1.2	Economic background	4
1.3	Social-psychological background	7
2	Framework and objectives of the study	11
2.1	Research training group 1086 “The role of biodiversity for biogeochemical cycles and biotic interactions in temperate deciduous forests”	11
2.2	Study area	11
2.3	Objectives of the study	14
2.4	Methods	15
3	Outline of the dissertation	17
4	References	19
Chapter II		27
	An empirical assessment of information and framing effects on economic preferences for environmental goods – A case study using functional forest ecosystem services	27
1	Introduction	28
2	Information and framing effects	30
2.1	Information effects	30
2.2	Framing effects	35
3	Methods	37
3.1	Study site and administration of the study	37
3.2	Information and framing treatments	37
3.3	The choice experiment	38
3.3.1	Attribute construction	38
3.3.2	Statistical design of the choice experiment	42
3.3.3	Econometric analysis of the choice experiment	42
3.4	Willingness to pay calculation	43
4	Results	44
4.1	Socio-demographic statistics of respondents	44
4.2	Influence of information and framing treatment on response rate and sample composition	46
4.3	Basic choice experiment model	48
4.4	Information and framing effects on preferences	49
5	Discussion	53
6	Conclusion	58
7	References	59
Chapter III		67
	Motives and beliefs behind willingness to pay for ecosystem services in Central German forest ecosystems*	67
1	Introduction	68
2	Methods	70
2.1	Study site and administration of the study	70
2.2	Social-psychological variables	70

2.2.1	Theoretical background	70
2.2.2	Variables from VBN theory	73
2.2.3	Environmental Concern	75
2.2.4	Variables from PMT	75
2.2.5	General and situational variables	76
2.3	The choice experiment	76
2.3.1	Attribute construction	77
2.3.2	Administration of the choice experiment	80
2.3.3	Econometric analysis of the choice experiment	80
2.4	Calculation of willingness to pay	81
2.5	Calculation of WTP models including social-psychological variables	82
3	Results	83
3.1	Socio-demographic statistics of respondents	83
3.2	Basic model results	84
3.3	Influence of socio-demographic variables on WTP	85
3.4	Influence of social-psychological variables on WTP	86
4	Discussion	91
5	References	96

Chapter IV _____ **101**

Explaining preferences for climate change mitigation – An application of Value-Belief-Norm theory, Environmental Concern-scale and Protection Motivation Theory using structural equation modeling _____ **101**

1	Introduction	102
2	Methods	103
2.1	Study site and administration of the study	103
2.2	Social-psychological variables	103
2.2.1	Theoretical background	103
2.2.2	Variables from VBN theory	107
2.2.3	Environmental Concern	107
2.2.4	Variables from PMT	107
2.3	The choice experiment	108
2.3.1	Attribute construction	108
2.3.2	Administration of the choice experiment	109
2.3.3	Econometric analysis of the choice experiment	109
2.4	Calculation of willingness to pay	110
2.5	The structural equation models	111
2.5.1	Construction of the structural equation models	111
2.5.2	Evaluation of the structural equation models	112
3	Results	114
3.1	Socio-demographic statistics of respondents	114
3.2	Statistics of the social-psychological constructs	115
3.3	Confirmatory analysis of the hypothesized models	116
3.4	Analysis of the modified models	119
3.5	Exploratory analysis of the influence of socio-demographic variables on the VBN model	123
4	Discussion	126
5	References	131

Chapter V	Fundamental results and conclusions	135
Appendices		141
Appendix A:	Framing treatment	141
Appendix B:	Information treatment	142
Appendix C:	Example of a choice set	144
Appendix D:	Calculation of CO ₂ sequestration and related afforestation measures in the study area	145
Appendix E:	Nested Logit estimation results of the base model including income effects	147
Appendix F:	Questionnaire scales	148
Appendix G:	Results of factor analysis of Personal Norms-scale	152
Appendix H:	Personal Norms-scale: Between-item correlations	153
Appendix I:	Results of factor analyses of Environmental Concern-scale	154
Appendix J:	Results of reliability analyses	157
Appendix K:	Mean and standard deviation values of social-psychological variables	158
Appendix L:	Multiple regressions	159
Appendix M:	Individual WTP – individual values and statistics	160
Appendix N:	Factor Loadings, Construct Reliability and Average Variance Extracted (AVE) of the LISREL measurement model-components	164
Appendix O:	Example of a questionnaire (German version)	167
Appendix P:	Information leaflet (German version)	190
Appendix Q:	Cover letters (German version)	194
Appendix R:	Curriculum Vitae	196
