Contents

Introduction 13

§1 Minimax stability criteria definition 19

§2 Stability of the mathematical pendulum oscillations at the upper equilibrium position 21

§3 Optional oscillations of the pendulum's point of support 25

§4 Pendulum oscillations for horizontal oscillations of the suspension point 29

§5 Stability of physical pendulum oscillations at the upper equilibrium position 37

§6 Pendulum vibrating moment 41

§7 Dynamic stability of the upper equilibrium position of a spherical pendulum 49

§8 Dynamic stability of the equilibrium position for the double pendulum with vertical oscillations of its supporting point 53

§9 Experimental checking of the existence of the vibration moment existence 61

§10 Averaging method in canonical systems 65

§11 Proof of the Minimax stability criteria for a single-degree-of-freedom system 67

§12 Derivation of the minimax stability criteria in the general case 71

Appendix: Topics for self-studying 74
